

Kenneth Yepez

AI Product Engineer / Agentic Systems Engineer

U.S. Citizen | Remote, U.S.-aligned time zones | kenneth@kennethyepez.com | kennethyepez.com | m8apps.com

SUMMARY

AI Product Engineer and founder-operator who builds AI-native products end to end: agent workflows, full-stack SaaS, business automation, deployment infrastructure, and production QA. Built AI/business systems across SaaS, WhatsApp automation, CRM, voice/screen AI interfaces, agent infrastructure, and GPU-hosted model routing.

Strong fit for teams that need a practical builder who can ship across product, backend, frontend, AI integration, infrastructure, evaluation, and operational debugging.

CORE SKILLS

AI product engineering, agentic workflows, workflow design, multi-agent orchestration, LLM API integration, prompt/context design, output evaluation, tool-calling systems, full-stack TypeScript, Next.js, React, Node.js, Supabase, Postgres, Vercel, Railway, Docker, systemd, Caddy, Tailscale, LiteLLM, vLLM, WhatsApp automation, CRM workflows, production QA.

SELECTED PROJECTS

Titan Agent Fleet

Distributed AI operating environment across Windows, Linux, macOS, and GPU infrastructure. Built memory-backed workflows, model fallback, sub-agent delegation, tool permissions, browser automation, scheduled jobs, verification gates, and deployment/reporting discipline.

CRM Automation Workflow

Business automation agent with inbound classification, contact/profile upsert, conversation logging, message logging, follow-up scheduling, webhook routes, inbox UI, and production smoke validation.

Customer-Facing Mobile Workflow

Mobile and SaaS workflow surfaces for onboarding, check-ins, chat, logs, plans, appointments, AI-assisted estimates, role-based operations, and public proof surfaces.

Agent Bubble

Public agent/chat product surface for AI interaction workflows and proof of productized AI interfaces.

EXPERIENCE

Founder / Builder - M8 Apps

Built AI-native applications, agent infrastructure, SaaS prototypes, business automations, and production workflows. Operated deployments, debugging, security remediation, and QA across Vercel, Railway, Supabase, Caddy, systemd, and local machines.

Founder / Operator - nutricionista.ai

Built AI and software products around customer workflows, business automation, CRM, growth, and agent-driven follow-up systems.

Founder / Operator - La Oficina Coworking

Operated business systems and identified automation opportunities for local service workflows.
